

# ***PREPARE THIS WINTER WITH CWM 1738 COLD WEATHER MICROBES***

As temperatures drop below 50°F (10°C), both nitrifying and BOD consuming organisms are negatively impacted and removal rates drop.

**CWM 1738**, contains a blend of psychrophilic (cold loving) organisms, which allows for enhanced organic and ammonia removal @ lower operating temperatures, maintaining removal rates similar to that of typical warm weather months.

IFM is offering a **Winter Bargain Sale (10% off)** for CWM 1738 effective November 1—December 31, 2013.

Please call **866-435-4436**, email [ifminfo@ifmenviro.com](mailto:ifminfo@ifmenviro.com) or visit our website [www.ifmenviro.com](http://www.ifmenviro.com) for more information and to place your order today. Be sure to mention this flyer with your order.
